Overview: The materials in this book are intended to facilitate the connection between standard introductory statistics concepts and their implementation in statistical software. The sections include: a summary of basic statistical methods; instructions on obtaining basic statistical output using SPSS, JASP, and jamovi; annotated output showing how to calculate and interpret the output for each software package; and summaries of how the results showed be reported in APA style.

Format: This online textbook uses PDF documents extensively. This is because: a) many of the documents require precision layouts and complex graphics not present or easily addressed in HTML, and b) PDF documents are more easily printable.

Licensing: This textbook is licensed under the Creative Commons Attribution 4.0 International license (<https://creativecommons.org/licenses/by/4.0/>). It is available for use by all for free. Suggestions for improvements can be directed to the author.
